

KONDETI TARUN TEJ

Full-Stack Developer | Backend Engineer

[GitHub](#) | [LinkedIn](#) | [LeetCode](#) | [Email](#)

PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building production web applications, real-time collaborative systems, REST APIs, authentication services, and AI-powered workflows. Proficient in React.js, Next.js, Node.js, FastAPI, Python, MongoDB, Docker, WebSockets, and cloud services. Experienced in shipping production-ready features, collaborating through Git/GitHub, and developing scalable backend systems.

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript

Frontend: React.js, Next.js, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, Flask

Databases: MongoDB, MySQL, Redis

Cloud & AI: AWS Lambda, AWS Bedrock, LangChain

APIs & Architecture: REST APIs, WebSockets, JWT Authentication, Event-Driven Systems

DevOps & Tools: Docker, Git, GitHub, Prisma, Jest, Pytest

EXPERIENCE

Onesol | Full - Stack Web Developer Intern

Apr 2026 – Present

- Develop features for CREO-LABS, an AI-powered platform for generating and refining brand posters.
- Built and enhanced the brand onboarding workflow and contributed to the poster-generation experience.
- Developed production features using Next.js, FastAPI, AWS Lambda, AWS Bedrock, LangChain, REST APIs, and Git/GitHub.
- Contributed code that was merged into the main branch and deployed as part of the live product.

Collaborated with the development team on user-facing functionality and gained practical experience with AI application architecture and service-to-service communication.

PROJECTS

[CodeAtlas](#) | Next.js, FastAPI, Python, Tree-sitter, PostgreSQL, Redis, Docker

July 2026 – Present

- Built a codebase visualization and architecture analysis platform that parses repositories and transforms source code into navigable architecture and dependency graphs.
- Developed a Python analysis engine using Tree-sitter for parsing, static analysis, symbol resolution, import/export analysis, and cross-file dependency mapping.
- Implemented FastAPI services and PostgreSQL-backed domain models with Redis support, following Clean Architecture, DDD, SOLID, and deterministic analysis principles.
- Designed incremental analysis using repository snapshots, SHA-256 file fingerprinting, change detection, dependency impact analysis, and architecture evolution tracking.

EDUCATION

Kalasalingam Academy of Research and Education (KARE) | B.Tech, Computer Science Engineering – Software Product Engineering

2024 – 2028

Kalvium UG Program in Computer Science (Software Product Engineering) | Campus: Krishnankovil

ACHIEVEMENTS & CONTRIBUTIONS

- Winner — Bannari Amman Institute of Technology Hackathon (2025), among 300+ participants.
- Qualified for Round 2 — Mumbai Hacks (2025), building a real-time collaboration prototype.
- Contributed to UI/UX and internal web-tool development.
- Contributed a pull request to an open-source React component library used by 5,000+ developers.
